

PREFACE

Pandemic Covid-19 forces all components of society together to cut the transmission process through health protocols, always keep a distance, use masks, and often wash hands with soapy water or alcohol-based hand sanitizers. And isolation for sufferers or symptomatic people.

In line with the success of suppressing transmission with screening methods, diagnosis, isolation, treatment, and case finding in the community marked by $R_0 < 1$, the community can start a new life by staying alert to Covid-19 transmission.

The New World Order, which also means living with the possible risk of Covid-19 transmission, must be vigilant and continue to implement the Health protocol.

2 Kata Pengantar

Medical Officers, especially in primary services, are at the forefront of prevention and early detection and management of COVID 19, including family assistance and community empowerment.

Greetings healthy and tough!

Dr. dr. Rustamadji, M.Kes
Chairperson of the COVID Task
Force of Universitas Gadjah Mada
